

# Reddit Image Upload Guide for Color Palette Matcher

---

## Your Images Are Ready!

---

I've created 3 images for your Reddit post:

### 1. reddit\_showcase.png (Main hero image)

- Shows example inputs (sunset, waves, rainbow)
- Lists all key features with checkmarks
- Professional, eye-catching design
- **Use this as your PRIMARY image**

### 2. screenshot.png (Detailed UI screenshot)

- Shows the full app interface with results
- Demonstrates the matching process with real data
- Shows Delta E values and purchase links
- **Use this to show HOW it works**

### 3. reddit\_screenshot\_large.png (High-res version)

- Larger, clearer version of the screenshot
- Better for detail viewing

---

## How to Upload Images to Imgur (Step-by-Step)

---

### Method 1: Direct Upload (No Account Needed)

1. Go to <https://imgur.com>
2. Click **"New Post"** (green button at top)
3. Click **"Browse"** or drag your images into the upload box
4. **Upload ALL THREE images at once** (creates an album)
5. Once uploaded, click **"Copy link"** next to each image
6. You'll get URLs like: `https://i.imgur.com/ABC123.png`

### Method 2: Using Imgur Desktop (Easier)

1. Go to <https://imgur.com>
  2. **Drag the images directly** from your file explorer into your browser window
  3. Wait for upload to complete
  4. Right-click each image → **"Copy image address"**
-

## How to Add Images to Your Reddit Post

### Option A: Image Post (RECOMMENDED for this tool)

1. Go to r/BambuLab (or your chosen subreddit)
2. Click **“Create Post”**
3. Choose **“Image & Video”** tab (not “Text”)
4. **Upload your showcase image** ( `reddit_showcase.png` ) directly
5. Add your **title**
6. In the **comment section after posting**, add:

```

Full UI screenshot: [https://i.imgur.com/YOUR\\_LINK\\_HERE.png](https://i.imgur.com/YOUR_LINK_HERE.png)

[Your post text goes here...]

```

**Why this works:** Image posts get WAY more engagement on Reddit than text posts. The showcase image is perfect as the main post.

### Option B: Text Post with Embedded Images

1. Create a **“Text Post”**
  2. Upload images to Imgur first
  3. In your post body, use this format:
- ```
```markdown
# What it looks like
```

Showcase

# Full UI Example

Screenshot

[Rest of your text...]

```

## Recommended Post Structure

### For r/BambuLab (Image Post)

**Main post:** Upload `reddit_showcase.png` as the image

**Title:**

I made a free **tool** that matches image colors to real filament colors (145 filaments, 16 brands)  perfect **for** AMS multi-color **prints**

**In first comment (post immediately after posting):**

Hey everyone! I built this free **tool for** anyone doing multi-color **prints** with the AMS.

**\*\*What it does:\*\***

- Load any image (photo, artwork, logo)
- Extracts dominant colors automatically
- Matches to REAL filament colors from 16 brands (Bambu Lab, Hatchbox, Prusament, eSun, etc.)
- Shows Delta E accuracy ratings
- Gives you direct purchase links + cost calculator

Full UI screenshot: [PASTE IMGUR LINK HERE]

**\*\*Download (Windows/macOS/Linux):\*\***

<https://github.com/Netspecs/3d-color-palette-matcher/releases>

It's **100% free, open source, and works offline**. I'd love your feedback on what features would make it more useful!

Some cool use cases:

- Multi-color lithophanes
- Character **prints** with accurate skin tones
- Logo reproduction
- Gradient/sunset **prints**

What would you use it **for?**

## Where Your Images Are Located

On your computer:

```
/home/ubuntu/3d_color_palette_matcher/docs/reddit_showcase.png
/home/ubuntu/3d_color_palette_matcher/docs/screenshot.png
/home/ubuntu/3d_color_palette_matcher/docs/reddit_screenshot_large.png
```

### To download them:

1. Click the **"Files" icon** at the top right of this chat
2. Navigate to `3d_color_palette_matcher/docs/`
3. Download all three images
4. Upload to Imgur
5. Post to Reddit!

## Image Specs (for reference)

| Image                       | Size        | Purpose                          |
|-----------------------------|-------------|----------------------------------|
| reddit_showcase.png         | 1200×800px  | Main hero image showing features |
| screenshot.png              | ~1200×900px | Detailed UI example              |
| reddit_screenshot_large.png | 1600×900px  | High-res version                 |

All images are optimized for Reddit (under 20MB, high quality).

## Pro Tips

1. **Post the image version first** on r/BambuLab – it will get more upvotes
2. **Add your detailed comment immediately** after posting (within 60 seconds)
3. **Upload to Imgur anonymously** – no account needed
4. **Keep the imgur links** – you can reuse them in other subreddits
5. **Desktop users see images better** – post during US daytime hours

## Alternative: Reddit Gallery Post

Reddit now supports **multi-image posts**:

1. Click “Create Post” → “Image & Video”
2. Click “+ Add Image” to upload multiple images
3. Upload: showcase → screenshot → (optional) example results
4. Users can swipe through the gallery

**This is VERY engaging** and shows the full workflow!

## Quick Checklist

- [ ] Download the 3 images from the Files panel
- [ ] Upload to Imgur (get 3 links)
- [ ] Choose Image Post or Text Post format
- [ ] Copy your title from the Reddit guide
- [ ] Post to r/BambuLab first (friendlier, smaller community)
- [ ] Add your comment with details immediately
- [ ] Reply to comments within the first hour
